Profile

Applied AI program manager, AI builder and UNSW educator with hands-on experience leading practical AI initiatives from zero to one. At Euler AI, I have managed multiple AI projects from early concept through prototype delivery, with a focus on turning emerging AI methods into usable tools for real users. My work includes EulerESG, an AI-powered ESG accountability platform that won the People's Choice Award at the UNSW SDG Showcase 2025. I bring strong experience in practical AI enablement, program delivery, stakeholder engagement and startup-style execution. I am not only driven by innovation, but also by responsible delivery, clear communication and real-world impact. I am a strong collaborator, a quick learner and someone who can help diverse communities understand and apply AI with confidence.

Core Fit for Practical AI Program Manager

Practical AI enablement: LLM workflows, RAG, vector search, prompt design, evaluation, responsible AI, AI-assisted prototyping
Startup-style execution: MVP scoping, discovery, feedback loops, roadmap planning, rapid iteration, product demos
Program design: workshops, tutorials, labs, learning outcomes, assessment design, capability uplift, community engagement
Stakeholder communication: students, researchers, clinicians, operations teams, engineers, executives, non-technical audiences

Experience

University of New South Wales (UNSW) Sydney, Australia
Casual Academic *May 2025 – Present*

- Explain complex technical concepts through tutorials, consultations, marking feedback, and practical examples across database systems, distributed computing, big data processing, and machine learning.
- Develop labs, course materials, and automated marking scripts, improving teaching consistency and feedback quality at scale.
- Support fair assessment design and exam preparation, balancing academic standards with clear communication for diverse student cohorts.

Euler AI Sydney, Australia
Research Scientist to Project Manager *Aug 2024 – May 2026*

- Lead zero-to-one applied AI initiatives across ESG accountability, construction career guidance, workforce equity, and responsible AI, turning early ideas into working prototypes, research outputs, and stakeholder-facing demos.
- Define project direction, scope, requirements, evaluation criteria, and delivery plans for practical AI systems using LLMs, retrieval, RAG, vector databases, and structured extraction.
- Manage cross-disciplinary collaboration with researchers, engineers, architects, sustainability experts, and industry stakeholders, using feedback to refine product direction and generate new ideas.
- Built and iterated EulerESG-style tools for ESG disclosure review and Australian ESG database/rating work, including work recognised with the *People's Choice Award* at the UNSW SDG Showcase 2025.
- Lead AI social-impact research and prototyping connected to gender equity, resume-screening fairness, identity handling, and inclusive career pathways, translating academic insights into practical AI use cases. (Details can show at Google Scholar)

Macquarie Group Sydney, Australia
Senior Associate, Data Analyst *Jul 2023 – Aug 2024*

- Worked in market operations and trading support, mapping data workflows between trading books, risk engines, finance systems, and downstream reporting.
- Partnered with risk, operations, and technology stakeholders to define requirements for dashboards, data controls, and automation improvements in a high-trust environment.
- Built SQL- and Python-based dashboards to monitor daily positions, cashflows, and P&L, helping teams identify data and pricing anomalies before reporting impacts.
- Developed automated checks across trades, market data, and valuation inputs, supporting issue triage and clearer operational decision-making.

Royal Far West Sydney, Australia
Data Analyst *Oct 2022 – Jul 2023*

- Built Power BI and R Shiny dashboards to improve visibility of healthcare service delivery, internal KPIs, and operational performance.
- Designed SharePoint-based incident reporting and document management workflows using Power Automate and Power Apps.
- Participated in an Azure Data Lake implementation project, supporting large-scale operational data management and reporting.
- Automated recurring reports using Python and Excel, improving accuracy, repeatability, and delivery speed.

University of Sydney Sydney, Australia
Summer Vacation Internship Program *Nov 2020 – Feb 2021*

- Conducted literature review, implementation, and benchmarking of graph search algorithms, identifying performance bottlenecks and optimisation opportunities.
- Collaborated with supervisors and research teams on experimental design for high-performance graph computing.

Selected AI, Program & Social Impact Work

- **AI Enablement and Teaching at UNSW**
  Design and deliver practical AI learning experiences for undergraduate and postgraduate students. Translate concepts such as LLMs, RAG, vector databases, machine learning, and data systems into hands-on workshops, labs, and project-based learning activities. Support learners from diverse technical backgrounds and help them apply AI tools to real-world problems.
- **EulerESG and Australian ESG Database & Rating Framework**
  Lead the development of AI-assisted systems for ESG accountability and sustainability intelligence. The work focuses on ESG disclosure review, framework mapping, evidence extraction, and organisation-level comparison using LLMs, retrieval systems, and structured evaluation. Received the *People's Choice Award* at the UNSW SDG Showcase 2025. Related publication: *EulerESG: Automating ESG Disclosure Analysis with LLMs* (arXiv 2025).
- **AI Construction Career Navigator**
  Lead a team building a web-based AI platform that helps users explore career pathways within Australia's construction industry. The project combines labour-market analytics, gender-equity research, and conversational AI to support students, graduates, and underrepresented groups in making career decisions. Related publication: *Building Futures: LLM-Guided Career Pathways for Australia's Construction Graduates* (IEEE BigComp 2026).
- **Responsible AI and Fairness Research**
  Conduct research on fairness, representation, and accountability in AI systems. Current work examines gender signals in resume screening, identity-related bias, inclusive career guidance, and the social impacts of AI-assisted decision making. Related publication: *When Gender Becomes Visible: Benchmarking Fairness in LLM-Based Resume Screening* (FAIML 2026).

Education

University of Sydney Sydney, Australia
Master of Information Technology *Feb 2020 – Nov 2021*

- ACM-ICPC 2020, 8th place in the South Pacific Area.
- AWS Deep Learning Competition, 2nd place in the university division.

Monash University Melbourne, Australia
Bachelor of Actuarial Science *Jun 2015 – Nov 2019*

- Strong foundation in statistics, probability, financial mathematics, risk modelling, and analytical problem-solving.

Skills

Practical AI: LLM applications, RAG, vector databases, semantic search, prompt design, structured extraction, AI evaluation, human review, responsible AI, AI-assisted prototyping.
Program & Product Delivery: workshop design, teaching, science communication, stakeholder engagement, MVP scoping, user discovery, feedback loops, roadmap planning, product demos, documentation.
Data & Tools: Python, SQL, R, C++, MATLAB, Spark, Hadoop, Azure Data Lake, Power BI, Tableau, R Shiny, Excel, SharePoint, Power Automate, Power Apps.
Domains: AI entrepreneurship, ESG/social-impact analytics, gender equity, workforce pathways, healthcare operations, regulated financial data, workflow automation.
Languages: Mandarin Chinese, native. English, fluent professional and academic working language.
